BJC Digital Healthcare Forum – inaugural meeting

Can digital technology rescue the NHS?

Friday 28th April 2017
London

Rationale: A novel 'hands on' meeting to assess if digital medicine can fill gaps in healthcare provision throughout the NHS.

UK health and social services are under relentless pressure to care for acutely ill patients. Equally vulnerable are patients with long-term conditions such as cardiopulmonary and chronic kidney disease, diabetes, cancer and mental health disorders.

In an era of sustainability and transformation plans (STPs), we need to urgently see what e-health, telemedicine, remote monitoring and other 'new' technologies have to offer. And in preparation for a new round of commissioning, what is available, what is affordable, what is cost-effective and, most importantly, what investments will improve patient care and outcomes?

Aimed at: Commissioners, GPs, secondary care practitioners and other professionals interested in e-health innovations, particularly in the management of long-term conditions.

Organised by: The British Journal of Cardiology (BJC) in association with the NHS, The Digital Health and Care Alliance, and the Telehealth Quality Group.

Designed by: Clinicians and leaders in health informatics.

Programme: see overleaf.

Fees (excl. VAT): Day registration fee £100; £65 concessions (nurses and clinical trainees); £250 commercial organisations.
