

KOMPAÏ

The Connected Healthcare Assistant

Provides greater independence for individuals at home, and in medical and healthcare establishments.

How can we help home and professional caregivers in their everyday tasks?

KOMPAÏ is a connected assistant designed to support caregivers and healthcare assistants in communities or at home. It is not meant to replace human help.

KOMPAÏ is an economically-rationalized solution to augment autonomy, safety, health monitoring, cognitive help and social ties.

At home or in community settings, there are a lot of things people want to be able to do independently.

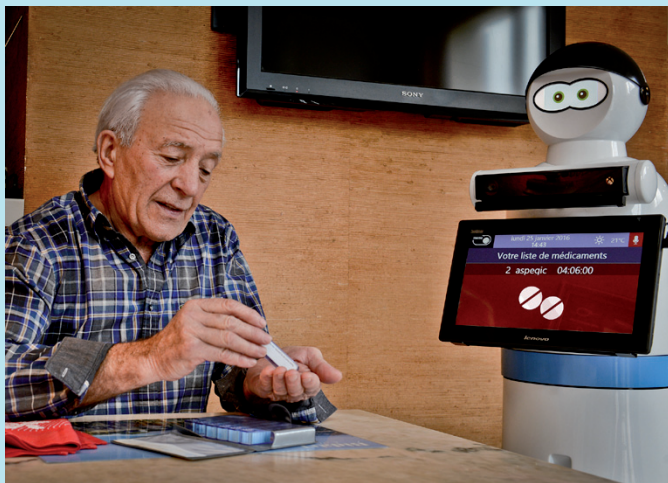

Security

Falling is a constant risk that can have serious consequences.

KOMPÄI can provide verifications, alert key individuals, and even call for emergency help.

KOMPÄI is equipped with a 3D camera and lasers that can scan local settings and detect obstacles. It is capable of facial recognition and detection of emotions.

Health Monitoring

KOMPÄI can manage medical parameters and connect with health professionals remotely.

KOMPÄI collects, aggregates, and stores all data from medical devices in the cloud.

KOMPÄI can securely transfer information to certified health platforms relying on its system of sensors. It can also manage follow-up surveys using a vocal system, and centralize all connected e-Health objects.

All this is possible with the connected healthcare assistant **KOMPAÏ**

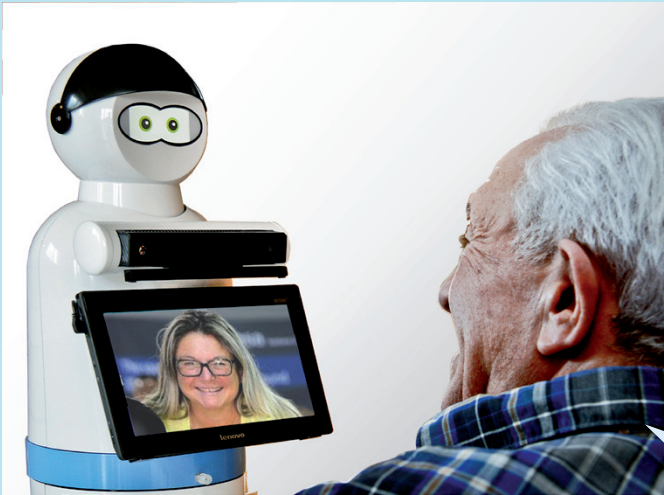

Making Each Day Better

Sometimes it can be hard to make sense of time and place.

KOMPÄI helps to recall useful information and offers interactive entertainment.

KOMPÄI has a tactile screen and vocal commands. Applications are pre-programmed, facilitating access to games and other modules. Complementary solutions can be integrated on-demand.

Maintain Social Ties

When we want to communicate, it is a great comfort to go beyond speaking and actually be able to see each other!

KOMPÄI enables feeling close to family and friends, talking with them like they were here.

KOMPÄI enables communicating with Skype or similar visual telecommunication system with its Internet connection, integrated camera, and high-quality microphone.

Move Independently

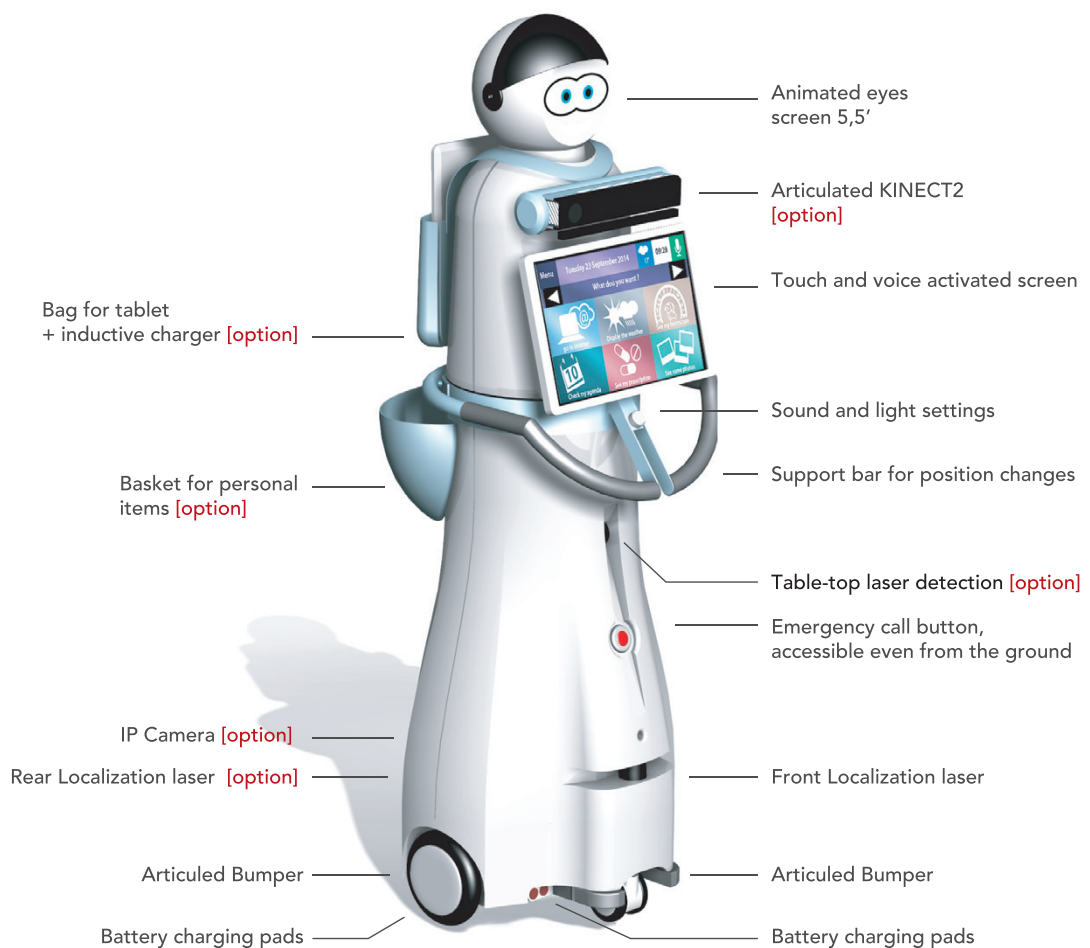

When comfortably seated, moving out of a chair can sometimes be complicated, and someone is not always there to help. But with KOMPÄI, you can simply call the robot over, get up, and move!

KOMPÄI has integrated rest bars and an adaptable support system to help people walk and change positions.

The KOMPAÏ Solution

Adaptable: from the purchase of the robot itself, to the integration of comprehensive services with specific features, technical assistance, installation, on-site integration, and set-up training.

A Standard Version of **KOMPAÏ** is Available*

(*) A specific model for Research and Development, delivered with the software development tools.

KOMPAÏ robotics created in 2016, after being incubated since 2009 ROBOSOFT, aims to develop robots to improve the independence and quality of life of non-autonomous individuals in their own homes and in establishments. **KOMPAÏ** is now commercially available for evaluation and pre-deployments.
