**3rings Care and Integrated Amazon Echo Service Launch**

3rings Care launches the integration with Amazon Echo family of technologies to provide an integrated care platform with the ability to raise alerts to family and carers and check on those people you care for!

As a stand alone innovation the Amazon Echo is a fantastic hub for all your smart home needs, but now integrated into 3rings Care services as a skill choice it is transformed into an revolutionary care support opportunity for formal and informal carers.

Working with 3rings Care will give your Telecare service the opportunity to provide the very latest in Internet of things technology that cares.

This latest development for 3rings works with the Amazon Echo in two modes; the first allows friends and relatives to '#AskAlexa' if their loved one is safe and okay. The second mode can be used in a loved one's home; they can ask Alexa to tell 3rings they need help which will send out an immediate alert to their friends and family network.
